Distribution Future Energy Scenarios 2025

Local Authority engagement webinar

06 May 2025

### Agenda

Our approach to DFES 2025 engagement – Oli Spink, Head of System Plann

Explanation of the data request – Meagan Reasoner, Senior Energy Analyst

Finding and using the Local Authority Workbook – Malachi Moses-Gair, DS

**Engagement timeline – Emily Taylor, Regional Decarbonisation Manager** 

**Q & A** 

#### Close

Today is a 1 hour webinar.

Please use the chat function to ask questions.

The webinar will be recorded and shared along with the slides after the event.

	15:00pm

Distribution Future Energy Scenarios 2025

Oli Spink Head of System Planning

### Introduction to our Distribution Future Energy Scenarios (DFES)

- Our Distribution Future Energy Scenarios (DFES) outline the range of credible futures for the growth of the distribution network. We have been producing them since 2015.
- They are the first stage of our network investment planning process that will ensure our network is ready for a decarbonised future.
- They encompass the growth of demand, storage and distributed generation including low carbon technologies such as Electric Vehicles and Heat Pumps.
- The National Energy System Operator's (NESO's) Future Energy Scenarios (FES) are used as the overarching framework for the DFES analysis. These are now known as pathways.
- Since 2021 we have also been using Local Authority data to inform our DFES assumptions.

### nationalgrid DS

### Why DFES matters

- We use our DFES data to create our Network Development Plans, ensuring it informs our future investment in our network
- We will also be using our DFES data as our basis for our ED3 business plan which will inform our investment from April 2028 to March 2033.
- Our DFES 2024 data and analysis was really comprehensive. 64% of Local Authorities told us about their plans and we are already using this in our discussions with Ofgem and NESO
- Therefore in 2025 we aren't going to ask you to tell us all of your plans again. You've done that and we really appreciate it.

We think the most efficient thing to do is to focus on two key areas -

- New developments. We know housing targets have changed, therefore we will ask you to update your domestic and non domestic numbers
- We will ask you to check our DFES 2024 data for your Local Authority and tell us if it aligns with your projections
- We won't be looking at generation as the implications of CP30 is being considered as part of this year's DFES.

### nationalgrid DS

# How we will engage with you

Meagan Reasoner and Patti Suwawmongkol

Senior Energy Analysts

REGEN

### **DFES Methodology at a glance**

#### **Distribution-connected electricity** generation

#### **Renewable and low carbon**

- Onshore and offshore wind
- Ground-mounted and rooftop solar PV
- Hydropower
- Marine

#### Fossil fuels and waste

- **Biomass CHP**
- Renewable engines (anaerobic digestion, landfill gas and sewage gas)
- Energy from waste
- **Diesel** generation
- Gas fired power

#### **Distribution-connected energy storage**

- Large-scale battery storage
- Non-battery storage, such as LAES and High-Density Pumped Hydro
- Domestic battery storage
- Domestic thermal storage (w/ heat pumps)

#### Large-scale electricity demand

#### New conventional demand

- New housing developments
- New non-domestic developments
- Data centres

#### Low carbon demand

- Hydrogen electrolysers

#### Small-scale new electricity demand

#### Low carbon heat

- Heat pumps (all types)
- Direct electric heating
- Domestic air conditioners

#### Low carbon transport

- Electric cars and motorcycles
- Electric LGVs
- Electric HGVs
- Electric buses and coaches
- Domestic EV chargers
- Non-domestic EV chargers

The attributes of the land, buildings and people within an ESA inform the future deployment of each individual technology type.

#### REGEN nationalgrid DSO

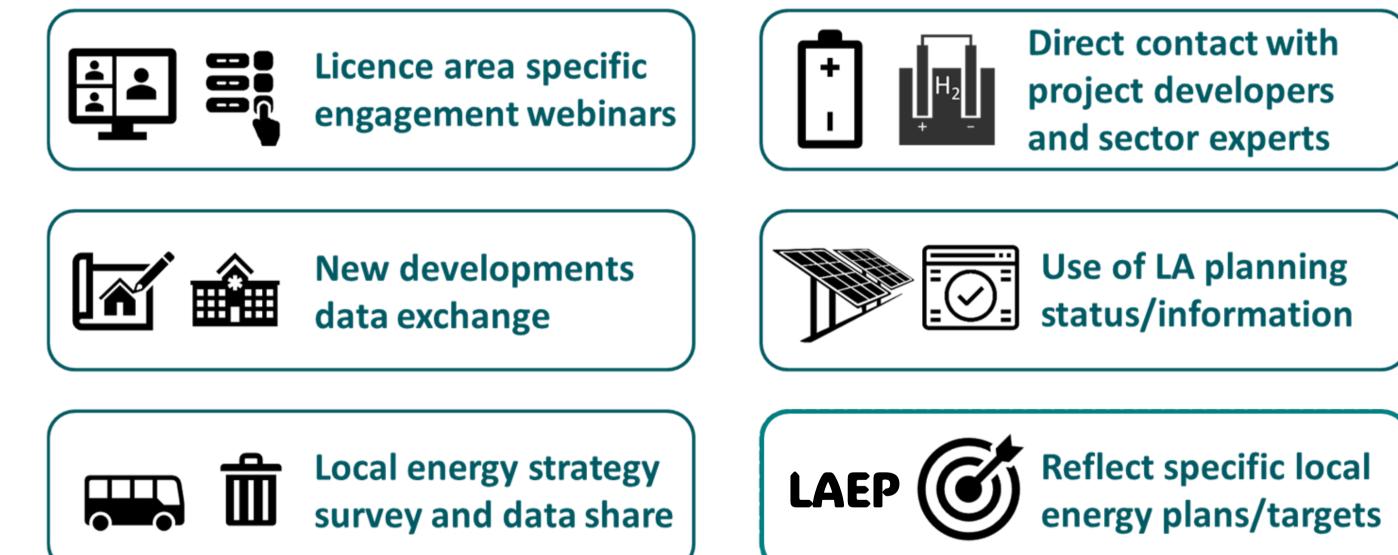

Individual ESAs, split by local authority borders

#### Electricity **Supply Areas**

Individual LV ESAs in the area around the Severn Estuary

### Use of local data and ambition in DFES 2024 analysis

#### REGEN national**grid**

### How local authorities influence each DFES Process

#### Local\_Authority\_Non-domestic

#### New data request this year: GIS data such as a GeoPkg or Shapefile for LDPs. This will aid in allocations being assigned the best ESA or

### How we are incorporating LAEP data

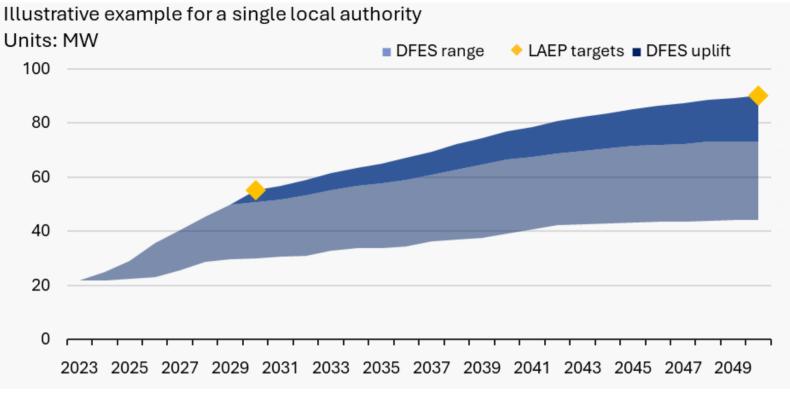

The DFES, as a bottom-up, local evidence-driven analysis of future electricity load growth, aims to reflect, reconcile and (where possible) align with LAEPs. There are four potential outcomes:

- 1. LAEP target is within DFES scenario projection 'range' no action
- 2. LAEP target is below the least ambitious scenario no action
- 3. LAEP target is credibly above the initial DFES 'range' the most ambitious scenario is uplifted to directly reflect the target
- 4. LAEP target is substantially above the DFES 'range', outside a credible range. Regen coordinate with NGED to agree on the best approach to adapt scenario or re-engage with local authority team.

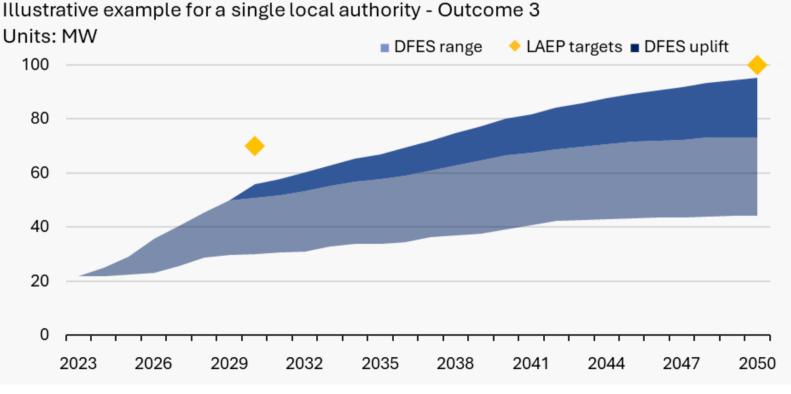

Outcome 1 &2 :LAEP ambition within or below DFES range.

#### nationalgrid DS REGE

Outcome 3: DFES scenario uplifted to reflect LAEP targets

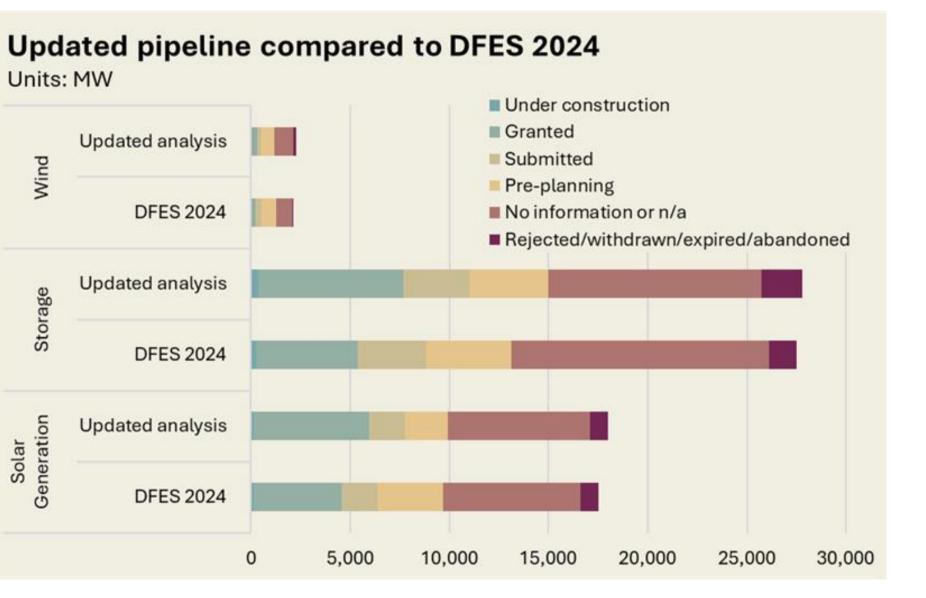

Outcome 4: LAEP targets not credible within DFES or FES scenarios

### Impact of CP30 on DFES analysis

- Regen is currently updating the DFES 2024 for key generation and storage technologies e.g. large-scale solar, wind and battery storage, to assess the impact of Clean Power 2030 (CP30) on NGED's region.
- CP30 and the associated reforms to network connection processes contains regional capacity allocations for these technologies and criteria that must be met for projects to secure a firm grid connection offer and connection date before 2030/2035 under the reforms.
- This aims to reduce the connections queue down to the more advanced and viable projects, accelerating connections of renewables and storage over the next 5-10 years. This is likely to result in a faster uptake of solar, batteries and onshore wind compared to the DFES 2024 projections.
- Absolute details of the revised queue of projects is still being worked through between NGED and NESO. Regen developing an initial view.
- As a result we are seeking to target further engagement around demand technologies, due to generation & storage being heavily influenced by these CP30 reforms.

REGEN

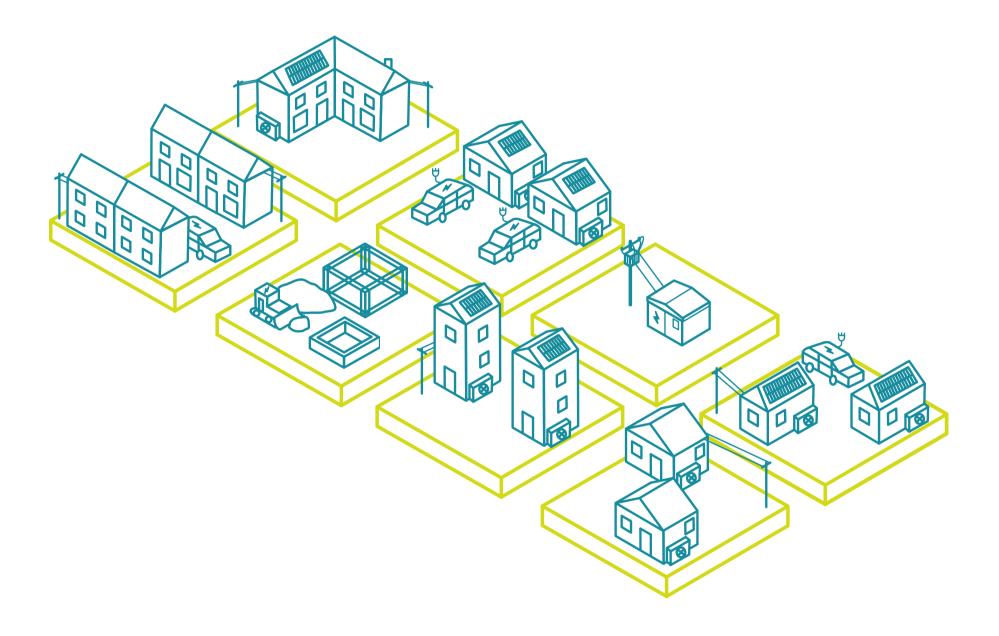

national**grid** 

### Survey to inform 2025 analysis

- We are working with NGED to undertake a streamlined DFES 2025 analysis to inform NGED's RIIO-ED3 business planning.
- Our Local Authority survey is intended to focus on reviewing existing DFES 2024 projections for demand technologies, rather than an update to the standard survey on low carbon plans and ambitions.
- We are seeking feedback on our DFES 2024 projections for key technologies e.g. rooftop solar PV, heat pumps, district heating, electric vehicles and EV charging infrastructure.
- We would also welcome any updates to LAEPs or LAEP-style plans that are (or will imminently be) published to inform the 2025 analysis.
- This survey will be issued in the coming weeks and links to the NGED's Local Authority Workbook.
